## Foreword

This Technical Report has been produced by 5GAA.

The contents of the present document are subject to continuing work within the Working Groups (WG) and may change following formal WG approval. Should the WG modify the contents of the present document, it will be re-released by the WG with an identifying change of the consistent numbering that all WG meeting documents and files should follow (according to 5GAA Rules of Procedure):

(1) This numbering system has six logical elements:

(a) x: A single letter corresponding to the working group:

where x =

T (Use Cases and Technical Requirements)

A (System Architecture and Solution Development)

P (Evaluation, Testbed and Pilots)

S (Standards and Spectrum)

B (Business Models and Go-To-Market Strategies)

E (Security and Privacy)

(b) nn: Two digits to indicate the year. i.e. 16,17,18, etc

(c) *zzzz*: Unique number of the document

(2) No provision is made for the use of revision numbers. Documents which are a revision of a previous version should indicate the document number of that previous version.

## Introduction

Many specifications and standards previously defined by ETSI TC ITS include details and dependencies based on an assumption of using ITS-G5 (which is based on 802.11) as the underlying access layer technology. Relevant protocol specifications and standards within ETSI TC ITS have been enabled in support of LTE-V2X as the underlying access layer technology. As the amended protocol specifications and standards are finalised and approved, the corresponding test specifications must also be amended as needed.

---

## 1 Scope

This TR documents the 5GAA recommended amendments to ETSI ITS test specifications. It is intended to guide the efforts and subsequent contributions of 5GAA member companies that are also ETSI members, as they seek to incorporate the amendments within ETSI TC ITS.

The present document provides a list of identified changes which should be considered in order to obtain media-independent test specification.

---

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.

## 4 Overview

The present document provides a list of recommended amendments for ETS ITS test specifications. The document is structured according to the main ‘clauses’ covering different layers of an ITS system, including general architecture, facilities, transport/network, access, security and other related specifications. Within each clause, sub-clauses for the relevant test specifications are used to list individual items which should be changed to make the specification media independent. Where applicable, references are provided in table format with corresponding parts/clauses of the

documents affected and recommendations provided for the identified items. If not otherwise stated in the present document, only published Technical Specification (TS) documents have been investigated; draft documents and Technical Reports (TR) have been excluded but should be considered for updating accordingly.
